Historical Trend in Remittance Inflows
January 2002-2010

Source: Bank of Jamaica

January 2010

For January 2010, net remittances were **US\$121.1 million**, which represented an improvement of **US\$7.7 million** or **6.8 per cent** relative to the corresponding period of 2009. This improvement resulted primarily from improvements in inflows through Remittance companies as well as a decline in remittance outflows (Table 1).

During the month, total remittance inflows were **US\$136.2 million**, an improvement of **US\$2.1 million** or **1.5 per cent**. This emanated primarily from *Remittance Companies* which recorded an increase of **US\$7.3 million** or **6.7 per cent**. *Other Remittances*¹ was **US\$19.9 million** representing a decline of **20.6 per cent** relative to the corresponding period in 2009. Due to its size however, this decline was not sufficient to fully offset the increase in gross remittance inflows. Total Remittance outflows were **US\$15.1 million**. This was **US\$5.6 million** or **27.2 per cent** below the corresponding period in 2009.

Although marginally better than 2009, the remittance inflows of **US\$136.2 million** was still below the trend observed in recent history (Graph 1). A continued improvement in remittance inflows in ensuing months is juxtaposed on the improving macro-economic conditions in source economies.

¹ This category consists of flows through institutions other than Remittance Companies that are classified as remittances by the Balance of Payments Manual (BPM5).

Table 3

* Provisional
 ** Growth relative to the corresponding period of the previous year
 ^ Flows through Remittance Companies

April to January 2009/10

For the first ten months of the 2009/10 fiscal year (FY), net remittances were **US\$1,326.5 million**, which represented a decline of **US\$89.7 million** or **6.3 per cent** relative to the corresponding period in the preceding period. The decline in net remittance emanated primarily from the decline in total remittance inflows (Table 3).

For the FY-to-date, total remittance inflows were **US\$1,523.3 million**, representing a decline of **US\$146.0 million** or **8.7 per cent** over the preceding fiscal year. The decline in total remittance inflows emanated mainly from the *Other Remittance* category, which declined by **US\$159.3 million** or **41.0 per cent**. *Remittance Companies* recorded total inflows of **US\$1,294.4 million**, a **US\$13.3 million** or **1.0 per cent** improvement compared to the corresponding period in fiscal year 2008/09.

Graph 4
Historical Trend Remittance Inflows
Apr-Jan

Source: Bank of Jamaica

The remittance inflows of **US\$1,523.3 million** for the first ten months of the 2009/10 fiscal year represents a reversal of the increase noted in the corresponding period in fiscal year 2008/09 (Graph 4). This decline was consistent with the global developments occurring during the review period.

Proposed Revision to Remittance Statistics

Introduction

Remittance has historically been defined by the Balance of Payments Manual. The current balance of payments manual (BPM5) has been revised and a new edition BPM6 was published in December 2008. The revised definition results from an increase emphasis being placed on remittances as these flows have increased significantly in recent years. It was believed that a revision to the current definition was necessary, which would provide further clarification as well as capture other flows considered remittances.

Definition

According to the fifth edition of the BPM, remittances to an economy are defined primarily as ‘workers’ remittances’. Workers’ remittances cover current transfers by migrants who are employed in new economies and considered remittances there. The revised BPM proposes an expansion in the items considered remittances. First, the concept workers’ remittance is replaced with personal transfers. Second, the concepts of personal remittances, total remittances and transfers to non-profit institutions serving households (NPISHs) are introduced. Within the balance of payments framework, investments in the economy by migrants, such as bank deposits and portfolio investments are excluded from remittances.

Personal Transfers is a new concept that consists of all current transfers in cash or in kind made or received by resident households to or from non-resident households. It is independent of the source of income of the sender, irrespective of whether the sender receives income from labour, entrepreneurial or property income, social benefits, as well as any other type of transfers. It is also independent of the relationship between the households irrespective of whether they are related or unrelated individuals.

Personal Remittances represent personal transfers plus compensation of employees (less taxes, social contributions and transport & travel expenditures made by residents employed by non-residents) and capital transfers between households. Personal Remittances include all household-to-household transfers and the net earnings of non-resident workers. It should be noted that ‘personal remittances’ also include transfers originating from who are not migrant workers. This definition therefore includes income that

the households in a country receive from individuals abroad, regardless of whether the individuals abroad are resident in the country of their employment or not.

Compensation of employees comprise wages, salaries, and other benefits, in cash or kind, earned by individuals in economies other than those in which they are residents. Employees, in this context, include seasonal or other short-term workers (less than one year) and border workers who have centres of economic interest in their own economies.

Capital transfers result in a change in the stocks of assets of one or both parties to the transaction without affecting the savings of either party. Capital transfers in kind are transfers of ownership of non-financial assets or forgiveness of debt. A transfer of cash is a capital transfer only when it is linked to or conditional on the acquisition or disposal of a fixed asset.

Total Remittances include personal remittances and social benefits. Social Benefits are defined as “benefits payable under social security funds and pension funds.

A **non-profit institution serving household (NPISH)** is an entity mainly engaged in providing goods and services to households, or the community, free of charge, or at prices that are not economically significant (and thus are classified as non-market producers), except those that are controlled and mainly financed by government units.

Three categories of remittances defined may be included as supplementary items: Personal Remittances, Total Remittances and Total Remittances & Transfers to Non-profit Institutions Serving Households (NPISHs).

Conclusion

Based on the results of the comparison between remittances currently reported (represented by private transfers & social benefits in table below) and BPM6, the overall change is not very significant. However, the gap between the two definitions is increasing steadily and this difference may become large if this gap continues to increase. The ‘current transfers to NPISH’ is the primary reason for this gradual divergence.
